part 2:

create a presete from DNG:

with this option you can use the settings that make up the preset and save as later with just one click

for this you need to open the DNG with the preset you want and click on the icon with three dots at the top of the screen

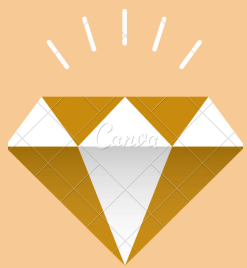

from the list select "create presets"

on the next screen, you will name your prest, choose a group of presets to organize it in your collection

(think of these groups as preset folders)
and also choose which preset settings you want to keep

after completing, click on the confirmation icon at the top of the screen

ready, your preset is created!
